RISK RESPONSE PLAN

Project Name

Mirror++

#	Risk	Risk Response	Description	Contingency Plan
1	Kinect Malfunctions	1) Get backup Kinect	The Kinect is an integral part of our project. If the device was broken or malfunctions, our project would be near useless	In such an event we would have to buy another Kinect device. Unfortunately, these devices are no longer in production. However, they are very common in the second-hand market.
2	Computer containing code is no longer accessible	1) Have regular backups of code	We could risk losing progress on our codebase if the data is not backed up	We will have regular backups of our code to ensure that even if such an event was to occur, we can still continue working on the project.
3	Mirror Breaks	1) Get another mirror 2) Switch to monitor only for MVP	The mirror itself is another important aspect of our project. Losing the mirror would significantly impact the look and "Wow" factor of our project.	We will try to get another mirror as soon as possible if such an event occurs. As a worst-case scenario, if we are unable to get a new mirror, we might have to demonstrate the project using the monitor display only.
